TRUSTED ENTERPRISE DEMONSTRATIONS FROM TRUSTED COMPUTING GROUP PLANNED AT RSA CONFERENCE EUROPE 2009

General Dynamics C4 Systems, Great Bay Software, Lumeta and Wave Systems to Demonstrate End-to-End Enterprise Security with Trusted Network Connect, Trusted Platform Module, Self-Encrypting Drives and Other Trusted Computing Technologies

PORTLAND, Ore. Oct. 12, 2009 – At the October 20-22 RSA Conference Europe 2009, Gold Event Sponsor Trusted Computing Group (TCG) and its member companies General Dynamics C4 Systems, Great Bay Software, Lumeta and Wave Systems will demonstrate how enterprises can use trusted computing to secure their systems, data and networks.

Trusted enterprise demonstrations will be shown in TCG's stand #2 at the conference, which will be at the Hilton London Metropole Hotel.

Trusted enterprise demonstrations specifically will show:

- Data protection using self-encrypting drives (SEDs)
- Dynamic differentiation and access control enforcement for a variety of users in mixed-use enterprise environments
- Detection and remediation of illicit activity, such as data leakage by an endpoint
- Industrial control system (SCADA) security with dynamic protection for interconnections between a control system network and an enterprise network
- The Trusted Platform Module (TPM) protecting data, networks and systems, including a demonstration of the trusted virtual environment for a military-grade solution based on commercial trusted computing technologies

Delegate attendees can learn more about trusted computing from presentations throughout the event. Carlos Da Silva, senior consultant, SureSkills, will speak Tuesday, October 20, 11:30, in a one-hour case study session titled "Integrating Trusted Computing Technology in the Enterprise." Da Silva will present a case study of the implementation of an enterprise-wide data encryption project. His talk will address business and IT issues related to this implementation and details of the project including success factors.

-- more --

On Thursday, October 22, 12:45 – 13:15, in the event's Technology Showcase in the Conference Central area, Brian Berger, Wave Systems executive vice president of sales and marketing and TCG board member and marketing work group chair, will address "Trusted Computing Today: Benefits and Solutions."

About Trusted Computing Group

The Trusted Computing Group (TCG) provides open standards that enable a safer computing environment across platforms and geographies. Benefits of systems based on Trusted Computing include protection of business-critical data and systems, secure authentication and strong protection of user identities, and the establishment of strong machine identity and network integrity. Organizations using built-in, widely available trusted hardware and applications reduce their total cost of ownership. TCG technologies also provide regulatory compliance that is based upon trustworthy hardware. More information and the organization's specifications and work groups are available at the Trusted Computing Group's website, www.trustedcomputinggroup.org.
