

## **Insightix adds support for IF-MAP from the Trusted Computing Group's (TCG) Trusted Network Connect (TNC)**

Ra'anana, Israel (May 13, 2009) – Insightix, an innovator of real-time network security intelligence and control solutions, today announced it has integrated support for IF-MAP from the Trusted Computing Group's (TCG) Trusted Network Connect (TNC) with its Business Security Assurance (BSA) solution suite.

Insightix BSA provides 24x7x365 network, device, and user intelligence, maintaining a real-time inventory of ALL assets connected to the enterprise network, their profiles, and the identities of those using the assets. Network information is continuously collected to reflect the actual real-time state of the network. Through its support for TNC's IF-MAP, Insightix BSA can now integrate with a variety of security solutions supporting IF-MAP providing them with real-time network situational awareness, which makes the foundation needed, by every security solution.

"IF-MAP interoperability is part of our overall strategy integrating with other security solutions that now can take advantage of our unique technology," said Ofir Arkin, Founder and CTO of Insightix. "Insightix BSA enables complete control over the security status of an enterprise network by ensuring completeness of operation, making it possible to apply appropriate security means against ALL applicable targets in real-time."

"Insightix support for IF-MAP adds unique capabilities to the combined Juniper Networks Unified Access Control (UAC) and Insightix Visibility solution," said Domenic Perri, director, Business Development and Alliances, Juniper Networks. "The comprehensive solution provides adaptive, dynamic and complete access controls against devices that are managed, unmanaged, physical or virtual. Insightix support for IF-MAP also adds an important building block in Juniper's Adaptive Threat Management Solutions, enabling our security products to provide a complete and dynamic threat management solution."

### **About Insightix**

Insightix is an innovator of real-time security intelligence and control solutions. Insightix patent-pending technologies are used to detect, identify, profile, audit and control ALL devices connected to your network, providing real-time network, endpoint and user intelligence. Insightix discovers an additional 20%- 50% of the devices residing on the enterprise network, devices that otherwise remain undetected, and automatically audits for the security configuration of endpoints based on the asset classification information collected.

The Insightix Business Security Assurance (BSA) solution suite provides a 360° view into the actual state of your network security effectively Bridging the Network Security Gap that exists between the actual security state of enterprise networks and what is known to IT.
